1 Your Vantage Software Is Licensed

Use of the Vantage software is controlled by a system license file. From time to time, you may need to update this file. This document describes how to accomplish that task.

2 Contact Information

If you have questions about the terms under which your software is licensed, or your rights regarding your license, please contact support@verasonics.com.

If you have technical questions regarding your license file or you wish to request an additional simulation license, please contact licensing-request@verasonics.com.

When contacting licensing-request@verasonics.com, please run the `systemInfo` command from the Matlab console on the host controller (host computer) that you wish to license. Then please attach the `systemInfo.txt` file that is generated by `systemInfo` to your email.

3 About Your License File

A copy of your current license file can be found in your customer download folder. Your customer download folder is located on the Verasonics download site, <http://downloads.verasonics.com>.

If you have difficulty accessing your customer download folder, please contact support@verasonics.com for assistance.

Your license file is a binary file named `license.enc`. It is located at the root of the *Vantage* folder within your customer folder.

To install your license file, copy it from your customer folder into your Vantage project folder. In so doing, you will be overwriting an existing file of the same name; this is expected behavior.

The next time you start your Matlab environment, your Vantage software should be properly licensed.

4 Your License File Supports Version 2.10 and Later

The format of the license file was changed in the Verasonics Vantage software 2.10 release. The license file found in your customer download folder is compatible only with the 2.10 and later Vantage software product releases.

If you are running an older release of the Vantage software, please contact licensing-request@verasonics.com for assistance, as described previously in this document.

5 License Files Are Common Across An Organization

All of the licenses for an organization are contained in a single license file. That single file must be copied or otherwise made accessible to all of the host controllers that will run the Vantage software or access the Vantage hardware unit.

It is good practice to install an updated license file on all of host controllers at one time, if you can do so.

6 Additional Simulation Licenses

New simulation licenses are requested by contacting licensing-request@verasonics.com and providing a *systemInfo.txt* file as an attachment to your email.
